Real chart examples, explained step by step

---

TheForexScalper Pro

Version 1.0

## How to read TFS Pro on any chart

Every example in this guide is a real TradingView screenshot with TFS Pro on the chart, from many markets and timeframes. Read each page in the same three steps.

### Find the orange stars

Entry 1. This is where the setup begins, at the signal candle.

### Look at the red rows

Entry 2 and Entry 3. Optional scale-in levels. Adding to a position increases your exposure.

### Look at the green rows

TP1, TP2 and TP3. The three target levels, in the direction of the setup.

## Things to know

- Rows can look stacked on indices, crypto and options because the distances are small next to the price. Zoom in on the signal area and all six levels appear.
- On option charts, direction means the direction of the option's own price (its premium), not the direction of the stock. A put premium can rise while the stock falls.
- When the stars disappear, the setup is over. That is your exit signal, not a stop-loss price.
- Different timeframes on the same market can show different setups, and sometimes opposite ones.
- Prices on each page are read from the chart axis and are approximate.

## How these examples were chosen

Please read this page before the charts. It explains what this guide is, and what it is not.

- These are hand-picked examples, chosen to show how the indicator draws its levels on different markets and timeframes.
- They are not a record of every signal, and they do not show how often a setup reaches its targets. Many of the examples here moved in the direction of the setup. Real trading also includes setups that reverse, stall or end early, and losses.
- Each page shows a status as of the screenshot: Targets passed, TP1 reached, In progress, or Pulled back. Pages marked In progress or Pulled back show that price does not always run straight to the targets.
- Some charts were captured with TradingView's Replay feature, which replays past price bars so an earlier setup can be shown.
- Plan for the setups that do not work: small position size and a stop-loss that you decide before you enter.
- Past examples do not predict future results.

# Gold Spot / U.S. Dollar

1H · FOREX.com

SHORT setup Targets passed

Entry 1 area  
Around 4,860

Target area  
Around 4,790 to 4,810

## What this chart shows

A short setup on the 1-hour Gold chart. The orange and red entry rows sit near 4,860 and the green target rows near 4,790 to 4,810. Price fell through the targets to about 4,520, then bounced to about 4,636 at the time of the screenshot.

### Key point

In a short setup the entry rows are on top and the targets sit below. The colours mean the same on every market.

Your notes

# Gold Spot / U.S. Dollar

1H · FOREX.com

LONG setup

Targets passed

Entry 1 area

Around 4,545 to 4,560

Target area

Around 4,580 to 4,600

## What this chart shows

A long setup. The entry rows (one orange, two red) sit near 4,545 to 4,560 and the three green target rows near 4,580 to 4,600. Price climbed through the targets to a high of about 4,722 and was near 4,676 at the time of the screenshot.

### Key point

A long setup mirrors a short one: entries at the bottom, targets above. Price does not move in a straight line, as the pullback from the high shows.

Your notes

# Gold Spot / U.S. Dollar

1W · FOREX.com

**SHORT setup**

**In progress**

★ Entry 1 area  
**Around 4,610**

★ Target area  
**Around 3,950 to 3,960**

## What this chart shows

A weekly setup. The orange and red entry rows sit near 4,610 and the green target rows far below, near 3,950 to 3,960. Price was near 4,166 at the time of the screenshot, so the setup was still open and no target had been reached.

### Key point

Weekly setups play out slowly and the rows are far apart. Check the timeframe before you judge how big a setup is.

Your notes

# Silver / U.S. Dollar

1D · FOREX.com

**SHORT setup**

**Targets passed**

★ Entry 1 area  
**Around 67.3**

★ Target area  
**Around 62.3**

## What this chart shows

A daily short setup on Silver. The entry rows sit near 67.3 and the three green target rows are stacked near 62.3. Price fell through the targets to about 55.5 and closed near 57.0 at the time of the screenshot.

### Key point

Silver moves in small numbers, so rows can look stacked like arrows. Zoom in on the signal area to see each one.

Your notes

# British Pound / U.S. Dollar

1H · Vantage

SHORT setup

TP1 and TP2 reached

★ Entry 1 area  
Around 1.3320 (red rows 1.3370, 1.3420)

★ Target area  
Around 1.3265 / 1.3167 / 1.3068

## What this chart shows

The rows here are spread wide apart, so every level is easy to see: red rows near 1.3420 and 1.3370, the orange Entry 1 near 1.3320, and the green targets near 1.3265, 1.3167 and 1.3068. Price fell through the first two targets, to a low of about 1.3163, and was near 1.3192 at the time of the screenshot.

### Key point

With wide spacing you can count all six levels. The third target had not been reached when this was taken.

Your notes

# Euro / U.S. Dollar

1H · Vantage

LONG setup

Just started

★ Entry 1 area  
Around 1.1237 (red rows 1.1186, 1.1135)

★ Target area  
Around 1.1275 / 1.1375 / 1.1475

## What this chart shows

A setup that has just started. The orange Entry 1 row sits at 1.1237 and price was at 1.1239, right on it. Red rows are below near 1.1186 and 1.1135, and the green targets above near 1.1275, 1.1375 and 1.1475. Nothing has played out yet, which is what the start of a setup looks like.

### Key point

At the start of a setup, price sits at Entry 1. Until price moves, the setup is only a plan, not a result.

Your notes

## Euro / U.S. Dollar

1W · Vantage

**SHORT setup**

**Targets passed**

★ Entry 1 area  
**Around 1.1700 (red rows 1.1750, 1.1800)**

★ Target area  
**Around 1.1360 / 1.1265 / 1.1155**

### What this chart shows

A weekly short on EUR/USD. The entry rows (orange, then red) sit near 1.1700 to 1.1800 and the green targets near 1.1360, 1.1265 and 1.1155. Price fell through all three, with a low near 1.1113, and was near 1.1239 at the time of the screenshot.

#### Key point

Weekly signals are rare and slow. Decide in advance whether you can hold a trade that long.

Your notes

## Euro / Japanese Yen

1W · Vantage

**SHORT setup**

**Targets passed**

★ Entry 1 area  
**Around 185.3 (red rows 186.1, 186.5)**

★ Target area  
**Around 179.6 / 178.5 / 177.5**

### What this chart shows

A weekly short on EUR/JPY. The orange Entry 1 sits near 185.3 with red rows near 186.1 and 186.5, and the green targets near 179.6, 178.5 and 177.5. Price fell through the targets to about 176.3 and was near 177.5 at the time of the screenshot.

#### Key point

The same weekly view works on any pair. Read the price axis first, because every pair has its own scale.

Your notes

## USD/CAD · same pair, two timeframes

4H and 1W · Vantage · same moment (price 1.41361)

### 4H: short setup

### 1W: long setup

## What these charts show

At the same moment the two timeframes show opposite directions. On the 4-hour chart (top) TFS Pro shows a short setup with entry near 1.4265 and targets near 1.4200, 1.4100 and 1.4000, and price at 1.4136 after passing the first target. On the weekly chart (bottom) it shows a long setup with entry near 1.3785 and targets near 1.4260, 1.4360 and 1.4460, with price between the entry and the first target.

### Key point

Different timeframes can disagree. Decide which timeframe you trade before you look at a signal.

# US 100 Cash CFD

4H · FXCM

SHORT setup

Targets passed

★ Entry 1 area  
Around 31,000

★ Target area  
Around 30,600

## What this chart shows

On the 4-hour chart the red entry rows sit near 31,000 and the green target rows near 30,600. They look stacked because index points are small compared with the price. Price fell through the targets to about 29,100 and was near 29,220 at the time of the screenshot.

### Key point

Index rows can look like single rows at default zoom. Zoom in on the signal area to separate them.

Your notes

# US 100 Cash CFD

15m · FXCM

SHORT setup

Targets passed

Entry 1 area

Around 29,950

Target area

Around 29,890

## What this chart shows

A 15-minute short setup on the US 100. The entry rows sit near 29,950 and the target rows near 29,890. Price fell sharply through the targets, to about 29,100, and was near 29,203 at the time of the screenshot.

### Key point

Faster timeframes move quickly, and one move can cross every level. Keep your size small.

Your notes

# Dow Jones Industrial Average

15m · FXCM

SHORT setup

Targets passed

Entry 1 area

Around 52,120

Target area

Around 52,030

## What this chart shows

A short setup on the Dow Jones index. The entry rows sit near 52,120 and the target rows near 52,030. A fast drop took price down to about 51,170, and it had bounced to about 51,472 at the time of the screenshot.

Key point

A single candle can travel far past your targets. Know in advance what you will do if that happens.

Your notes

## Dow Jones Industrial Average

15m · FXCM

**LONG setup**

**Pulled back after target**

✦ Entry 1 area  
**Around 51,115**

✦ Target area  
**Around 51,230**

### What this chart shows

A long setup where price reached the target area and then reversed. The entry rows sit near 51,115 and the green target row near 51,230. Price rose to about 51,440, then fell back to about 51,141, close to the entry area, at the time of the screenshot.

#### Key point

Price can reach the targets and come back. A setup does not always hold its gains, so plan your exit before you enter.

Your notes

# DAX Index

15m · FXCM

SHORT setup

Targets passed

Entry 1 area  
Around 24,920

Target area  
Around 24,840

## What this chart shows

A short setup on the German DAX index. The entry rows sit near 24,920 and the target rows near 24,840. Price dropped through the targets to about 24,760 and was near 24,786 at the time of the screenshot.

### Key point

The same indicator reads every index the same way: for a short setup the entries are on top and the targets below.

Your notes

# US 100 Cash CFD

30m · FXCM

LONG setup

Pulled back after target

Entry 1 area

Around 30,520

Target area

Around 30,630

## What this chart shows

A long setup with entry rows near 30,520 and a green target row near 30,630. Price rose above the target, to about 30,690, then fell back to about 30,565, between the entry and the target, at the time of the screenshot.

### Key point

A setup in progress is not a result. Until the stars disappear, the setup is still valid, but price can move either way.

Your notes

## Japan 225 · one market, two timeframes

4H and 15m · OANDA · same moment

**4H: entry near 65,800, targets near 64,100**

**15m: entry near 65,450, targets near 65,250**

### What these charts show

Both charts show a short setup on the same index at the same moment. On the 4-hour chart (top) the entry rows sit near 65,800 and the targets near 64,100. On the 15-minute chart (bottom) the entry rows are near 65,450 and the targets near 65,250. Price on both was near 63,490 at the time of the screenshots, below every target.

#### Key point

Smaller timeframes draw smaller distances between the rows. The same price move looks different on each, so pick the timeframe that fits you.

# Bitcoin / U.S. Dollar

30m · Bitstamp

LONG setup

Targets passed

Entry 1 area

**Around 74,800**

Target area

**Around 76,100**

## What this chart shows

A long setup on Bitcoin. The orange and red entry rows sit near 74,800 and the green target rows near 76,100. After a steady climb, one large candle took price to about 79,460. It was near 79,233 at the time of the screenshot.

### Key point

Crypto trades around the clock, so a single candle can cross every level.

Your notes

## Bitcoin / U.S. Dollar

15m · Bitstamp

**SHORT setup**

**TP1 reached**

✦ Entry 1 area  
**Around 59,000**

✦ Target area  
**Around 58,150 / 58,050 / 57,950**

### What this chart shows

The entry rows sit near 59,000 and the three green targets near 58,150, 58,050 and 57,950. Price fell to about 58,090, touching the first target, and was near 58,269 at the time of the screenshot. Only the first target had been reached.

#### Key point

Many setups reach one target and then stall. Decide in advance how you will handle that.

Your notes

## Bitcoin / U.S. Dollar

4H · Bitstamp

**SHORT setup**

**In progress**

★ Entry 1 area  
**Around 82,050**

★ Target area  
**Around 79,550 to 79,750**

### What this chart shows

A 4-hour short on Bitcoin. The entry rows sit near 82,050 and the target rows near 79,550 to 79,750. Price was near 80,986 at the time of the screenshot, partway between the entry and the targets, so the setup was still open.

#### Key point

A setup in progress is not a result. While the stars stay on the chart, the setup is still valid.

Your notes

# Bitcoin / U.S. Dollar

5m · Bitstamp

SHORT setup

Targets passed

Entry 1 area  
Around 81,990 to 82,100

Target area  
Around 81,720 to 81,920

## What this chart shows

On the 5-minute chart the six rows cover about 380 points, from the red rows at the top to the green rows at the bottom. Price dropped through the green targets to about 80,930.

### Key point

Short timeframes draw tight rows and give many setups. Each one needs its own risk limit.

Your notes

# WTI Spot Oil

1H · FxPro

SHORT setup

Targets passed

✦ Entry 1 area

Around 89.4 to 89.5

✦ Target area

Around 87.0

## What this chart shows

A short setup on WTI crude oil. The entry rows sit near 89.4 to 89.5 and the target rows near 87.0. Price fell through the targets to about 81.8 and was near 82.5 at the time of the screenshot.

Key point

Oil can move fast around news. Keep your position small enough that a gap does not hurt you.

Your notes

# WTI Spot Oil

1M · FxPro

LONG setupIn progress

✦ Entry 1 area  
Around 70.5

✦ Target area  
Around 114

## What this chart shows

A monthly long setup. The orange and red entry rows sit near 70.5 and the green target rows near 114. Price was near 98.9 at the time of the screenshot, partway between entry and targets, with the monthly candle still open.

Key point

Monthly setups take months to play out. The colours still mean the same thing, but not many traders can hold that long.

Your notes

## 1D · NYSE

A daily short on Goldman Sachs. The entry rows sit near 1,040 and the target rows near 1,000. Price fell through the targets to about 860 and was near 881 at the time of the screenshot. The E marker on the chart is an earnings date.

Stocks can gap at the open and around earnings. Check the calendar before you hold a position.

# Wells Fargo & Company

4H · NYSE

LONG setup

In progress

Entry 1 area  
Around 80.4 to 81.0

Target area  
Around 84.9 / 86.0 / 86.9

## What this chart shows

A long setup that was still open. The orange and red entry rows sit near 80.4 to 81.0 and the three green targets near 84.9, 86.0 and 86.9. Price was near 83.88 at the time of the screenshot, between the entry and the first target.

### Key point

Setups in progress are normal. Decide your plan for the first target before price gets there.

Your notes

## Tesla, Inc.

1D · NASDAQ

**SHORT setup**

**In progress**

★ Entry 1 area  
**Around 380**

★ Target area  
**Around 347**

### What this chart shows

A daily short setup. The entry rows sit near 380 and the target rows near 347. Price fell to a low of about 349 and was near 355 at the time of the screenshot, close to the first target but not yet at it.

#### Key point

Close is not the same as reached. Wait for price to touch the level you planned for.

Your notes

## Sandisk Corporation

4H · NASDAQ

**SHORT setup**

**Targets passed**

★ Entry 1 area  
**Around 1,800**

★ Target area  
**Around 1,650**

### What this chart shows

A short setup on a stock with a high price. The entry rows sit near 1,800 and the target rows near 1,650. Price fell well below the targets, to about 1,299 at the time of the screenshot.

#### Key point

A high share price means big point moves. Size your position by how much you can lose, not by how many shares you can buy.

Your notes

NVDA · Put 212.5

21 Oct 2026 expiry · 1H · OPRA

LONG setup (option premium)

In progress

✦ Entry 1 area

Around 2.20

✦ Target area

Around 4.30 / 5.30 / 6.30

**What this chart shows**

A long setup on a put option's premium. The orange Entry 1 sits near 2.20, with red rows near 1.70 and 1.20, and widely spaced green targets near 4.30, 5.30 and 6.30. The premium was near 2.87 at the time of the screenshot, above the entry but well below the first target. The orange D marker is a chart marker, not part of the setup.

Key point

A put premium can rise while the stock falls. Low-priced options can double or halve in hours, so size them small.

Your notes

## GOOG · Put 335

23 Oct 2026 expiry · 1H · OPRA

**LONG setup (option premium)**

**Pulled back after target**

✦ Entry 1 area  
**Around 3.10 (red rows 2.60, 2.15)**

✦ Target area  
**Around 5.45 / 6.50 / 7.50**

### What this chart shows

A long setup on a put option's premium. Entry 1 is near 3.10, with red rows near 2.60 and 2.15 and green targets near 5.45, 6.50 and 7.50. The premium rose to about 5.60, reaching the first target, then fell back to about 4.70 at the time of the screenshot.

#### Key point

Option prices swing hard in both directions. Reaching a target does not mean the premium will stay there.

Your notes

# NIFTY 50 · Spot index

15m · NSE

## NIFTY 50 · Spot index

15m · NSE

**SHORT setup**

**Targets passed**

✦ Entry 1 area  
**Around 23,870**

✦ Target area  
**Around 23,810**

### What this chart shows

Another 15-minute short setup. Entry rows near 23,870 and target rows near 23,810. Price dropped below the targets, to about 23,622. Short timeframes give more setups and move quickly, so keep your risk small.

#### Key point

Use any timeframe that suits your style. The levels are drawn the same way each time.

Your notes

## BANK NIFTY · Spot index

1H · NSE

LONG setup

Targets passed

★ Entry 1 area  
Around 55,200

★ Target area  
Around 55,650

### What this chart shows

A long setup on the Bank Nifty index. The red entry rows sit near 55,200 and the green target rows near 55,650. Price rose above the targets, to about 55,844, with a high near 56,050.

#### Key point

On indexes the numbers are large, so the rows may look close together. Zoom in to separate them.

Your notes

ONGC · Oil & Natural Gas Corp

Daily · NSE

SHORT setupTargets passed

★ Entry 1 area  
Around ₹239 to ₹240

★ Target area  
Around ₹229 to ₹232

What this chart shows

The same indicator works on the daily chart. Entry rows near ₹239 to ₹240, with three target rows spread near ₹229 to ₹232. Price fell below the targets, to about ₹222 at the time of the screenshot.

Key point

Daily charts give fewer setups and slower moves. The rows are easy to read because they are well spaced.

Your notes

LTM · LTM Limited

1H · NSE

LONG setup

Targets passed

★

Entry 1 area  
Around ₹4,020 to ₹4,030

★

Target area  
Around ₹4,110 to ₹4,130

What this chart shows

A long setup. The red entry rows sit near ₹4,020 to ₹4,030 and the green target rows near ₹4,110 to ₹4,130. Price climbed above the targets, to about ₹4,416.

Key point

Follow the colors: orange and red at the bottom, green above. That is a long setup.

Your notes

TCS · Tata Consultancy Services

4H · NSE

LONG setup

Targets passed

✦ Entry 1 area  
Around ₹2,080

✦ Target area  
Around ₹2,150 to ₹2,165

What this chart shows

On the 4-hour chart the rows are clearly separated. Entry rows near ₹2,080 and targets near ₹2,150 to ₹2,165. Price rose well above the targets, to about ₹2,467, with a high near ₹2,485.

Key point

Higher timeframes make the rows more spread out and easier to read.

Your notes

## NIFTY 50 · Put 22900

27 Oct 2026 expiry · 30m · NSE

LONG setup (option premium)

Targets passed

Entry 1 area  
Around ₹85 to ₹90

Target area  
Around ₹195 to ₹205

### What this chart shows

A long setup on a put option's premium. Entry rows near ₹85 to ₹90 and the three green target rows near ₹195 to ₹205. The premium then rose well above the targets, with a high near ₹314 and about ₹261 at the time of the screenshot.

#### Key point

A long setup on a put means the premium rises. The index may be falling at the same time.

Your notes

SENSEX · Call 74800

22 Oct 2026 expiry · 1H · BSE

LONG setup (option premium)

Targets passed

★ Entry 1 area  
Around ₹50

★ Target area  
Around ₹110

**What this chart shows**

A long setup on a call option. The orange and red entry rows sit near ₹50 at the bottom, with the green target rows above near ₹110. The premium then rose far above the targets, with a high of about ₹407. The orange D marker is a chart marker, not part of the setup.

Key point

Long setups read the same way as short ones, just mirrored: entries at the bottom, targets above.

Your notes

## SENSEX · Call 75000

22 Oct 2026 expiry · 1H · BSE

LONG setup (option premium)

Targets passed

★ Entry 1 area  
Around ₹40

★ Target area  
Around ₹90

### What this chart shows

Same idea on a different strike. Entry rows near ₹40, target rows near ₹90. The premium moved well beyond the target area, with a high of about ₹418, then pulled back to about ₹280. This is why the plan matters: price does not move in a straight line.

#### Key point

The premium pulled back after a big run. Price rarely moves in a straight line, so plan your exits in advance.

Your notes

## SENSEX · Call 74800

29 Oct 2026 expiry · 1H · BSE

LONG setup (option premium)

Targets passed

★ Entry 1 area  
Around ₹165

★ Target area  
Around ₹320

### What this chart shows

A longer-dated contract with a bigger premium. Entry rows near ₹165, target rows near ₹320. The premium rose past the targets, with a high of about ₹760, and was near ₹640 at the time of the screenshot.

#### Key point

The same indicator works on weekly and monthly expiries. Choose contracts that suit your style and time.

Your notes

TCS · Call 2480

27 Oct 2026 expiry · 1H · NSE

LONG setup (option premium)Targets passed

★ Entry 1 area  
Around ₹8

★ Target area  
Around ₹16 to ₹18

**What this chart shows**

On this chart the rows are spread out, so you can see all three entry rows (one orange, two red) near ₹8 and all three target rows near ₹16 to ₹18. The premium rose far beyond the target rows, to about ₹37. This is what a clean, zoomed-in setup looks like.

**Key point**

Zoomed in, you can count all three entry rows and all three target rows. This is the clearest way to read a setup.

Your notes

## BAJAJ FINANCE · Call 990

27 Oct 2026 expiry · 1H · NSE

**LONG setup (option premium)**

**In progress**

★ Entry 1 area  
**Around ₹13.5**

★ Target area  
**Around ₹23 to ₹26**

### What this chart shows

Not every example has finished. Entry rows near ₹13.5, targets near ₹23 to ₹26. At the time of the screenshot the premium was near ₹20, between the entry and the targets, and the stars were still on the chart. While the stars stay, the setup is still valid.

#### Key point

A setup in progress is not a result. Until the stars disappear, the setup is still valid.

Your notes

# KOTAK BANK · Call 450

23 Nov 2026 expiry · 1H · NSE

LONG setup (option premium)

In progress

★ Entry 1 area  
Around ₹11.5

★ Target area  
Around ₹16 to ₹18

## What this chart shows

Another setup still running. Entry rows near ₹11.5, with the three green target rows near ₹16 to ₹18. Price had moved up to about ₹13, a high of about ₹16 earlier, and had not yet settled at the targets. This page shows what an open setup looks like.

Key point

Not every setup reaches its targets quickly. Patience and risk control matter as much as the entry.

Your notes

MCX Ltd · Put 3150

Around ₹60

★ Target area

Around ₹90 to ₹95

What this chart shows

Here the rows are tightly stacked (small arrows), with entry near ₹60 and targets near ₹90 to ₹95. Price was about ₹69 at the time of the screenshot, moving from the entry toward the targets. Zoom in to separate the rows.

Key point

Tight rows look like arrows. Zoom in on the signal area before you decide anything.

Your notes

## A chart to be careful with

WIPRO · Put 182.5 · 27 Oct 2026 expiry · 1H · NSE

**Illiquid contract: not a good example**

### Why this chart looks wrong

This option trades very rarely, so many hours have no candles at all and the price jumps in big gaps. TFS Pro draws its rows from the prices it can see, so the levels here (entry near ₹3, a far-away target near ₹23) do not make practical sense.

- Prefer options with active trading and tight bid and ask prices. Nifty, Bank Nifty, Sensex and large stocks near the current price are usually the most active.
- If the candles have gaps and the price barely moves, skip the contract instead of forcing a trade.
- A setup is only as reliable as the price data behind it.

## Trading risk: please read

The examples in this guide are past charts. They show how the indicator draws, not what will happen next.

### Leverage can magnify losses

Forex, CFDs, futures and crypto are often traded with leverage. A small move against you can mean a large loss, and in some products a loss bigger than your deposit.

### Use a stop-loss and small size

Decide in advance how much you can afford to lose on one trade, and size your position to that number. Keep your risk small.

### Adding to a position adds risk

Entry 2 and Entry 3 are optional. Each one increases your exposure, so only add if your plan allows it.

### Price can jump past your levels

Around news, market opens and weekends, price can gap. A stop-loss is not guaranteed to fill at your price, and options can lose value quickly.

### Most retail traders lose money

Regulators in several countries have published findings that most retail traders in leveraged products lose money. Treat TFS Pro as one tool, not a guarantee.

### Not advice

TFS Pro is an educational charting tool. It does not give buy or sell recommendations. Always do your own analysis.

# Disclaimer and contact

TheForexScalper Pro and TFS Pro are educational charting tools. Nothing in this guide is investment advice, a recommendation, a tip or a call to buy or sell any security, currency, commodity, option or other instrument.

All charts are past examples chosen to explain how the indicator draws its levels. They are not a complete record of signals, and past examples do not guarantee or predict future results. Markets can move against any setup.
